

# Research Data Management Training for the German National Research Data Infrastructure

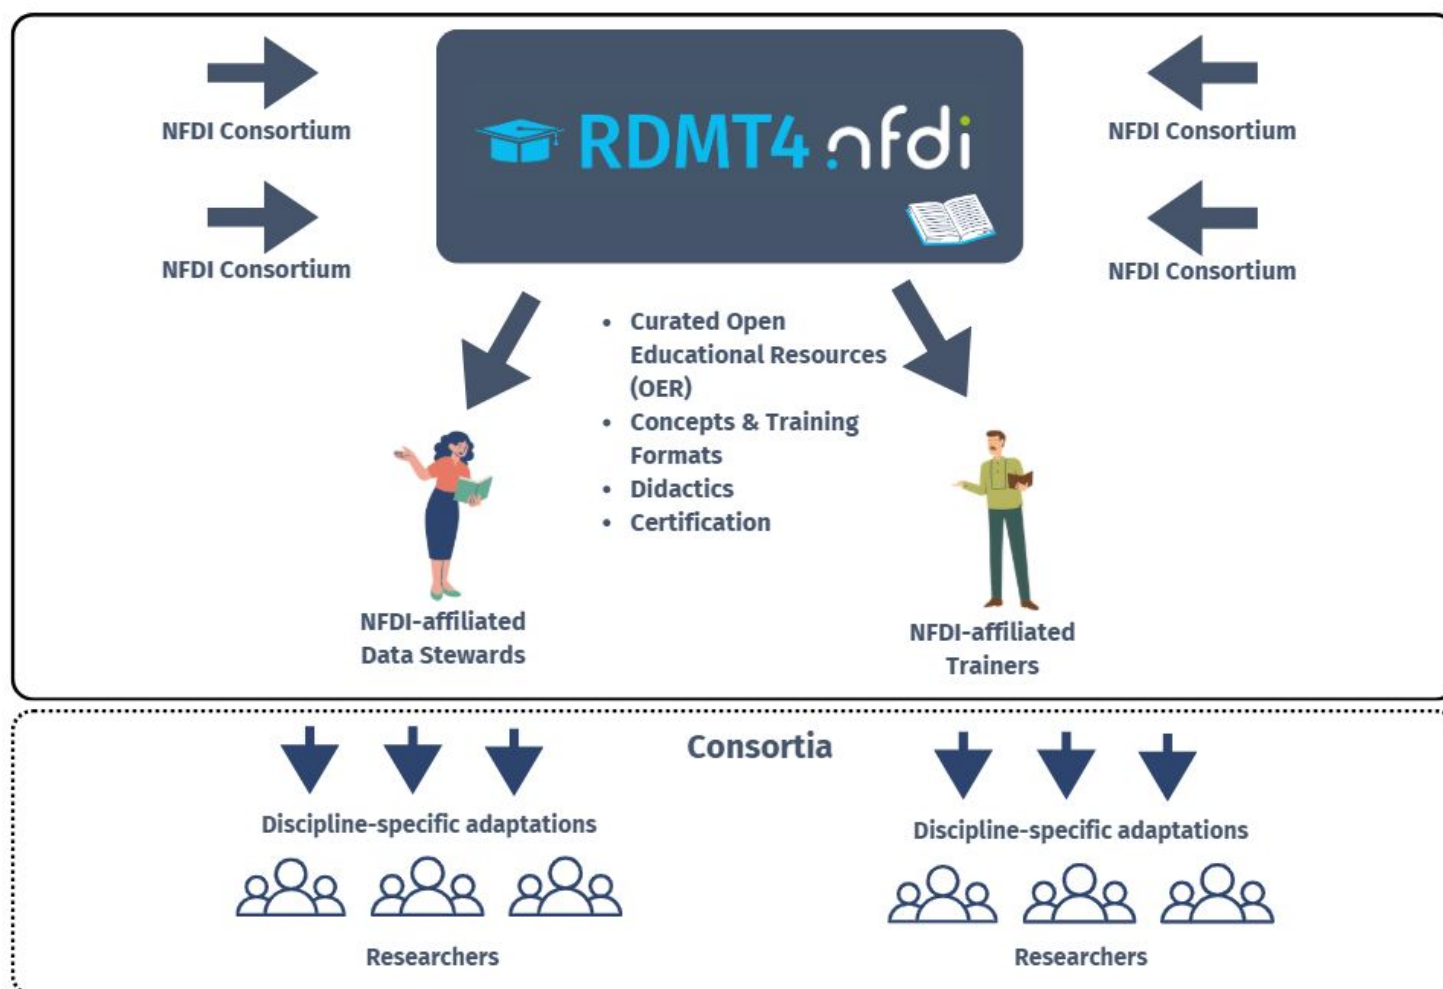

<https://base4nfdi.de/projects/rdmtraining4nfdi>

## Vision

- Modular collection of **foundational RDM training materials** (train-the-trainer approach)
- Develop **concepts and training formats, didactic concepts, and certification**
- **Strengthen the network** of RDM experts

## Vision of Implementation

## Persona Impressions

I am a **data steward**, and I just started working in the consortium NFDI4Cakes. I am supposed to train my researchers in FAIR RDM. I tried finding resources online but got overwhelmed since there are so many materials out there and I do not know which material is high quality. RDMT provides a collection of training materials and is trying to establish a certification for materials, which is great!

I am a **trainer for RDM** and I want to train my researchers as good as possible in conducting FAIR RDM. Often, I do not find the time during my busy days to educate myself further on this topic. It would be great to have an intensive training format suited to my needs to learn all the essentials in a short period of time.
